DETAILED ACTION

Examiner's Statement of Reasons for Allowance

1. Claims 1-37 are allowed over prior art.
2. This action is in reply to applicant's correspondence of 27 October 2005

Specification

The disclosure objection is withdrawn.

Double Patenting

The nonstatutory double patenting rejection is withdrawn.

3. The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.
4. As per claims 1,13,14,and 26 generally, prior art of record, Wu et al, U.S. Patent 5,774,551, fails to teach alone, or in combination, other than via hindsight, at the time of the invention, the features as discussed and remarked upon in the response of 10/27/2005 to office action of 7/27/2005.

Specifically, (as per claim 1, for example) prior art dealing with client management of network node/node assets via an intermediate (i.e., the associated client's server) node, inclusive implicitly of various network management security/authentication functions (i.e., Yin, J., "Automating the Remote Execution of Server Administrator CLI Commands, PowerSolutions, May 2002, pp. 50-54, entire article, <ftp.jp.dell.com/app/2q02-Yin.pdf>, and Lawrence, R., "A survey of Process Migration Mechanisms", Dept. of CS, Univ. of Manitoba, 5/29/1998, entire article, www.cs.uiowa.edu/~rlawrenc/research/Papers/proc_mig.pdf),

Art Unit: 2136

whereas the said various network management functions encompass various remote execution/process migration mechanisms (i.e., remote execution processes), nowhere in the prior art is found the *italicized* claim elements (i.e., dealing with the authentication/credential information; post authentication) serving to patently distinguish the invention from said prior art;

“A method for providing secure communication of commands from a client to a plurality of hosts via a network server, comprising:

utilizing

authentication information and

credentials cache information within the network server

to facilitate the secure communications,

wherein

the authentication information is erased and

the credentials cache information is destroyed after the utilizing,

receiving at least one command from the client;

initiating one or more remote execution processes for

processing the at least one command;

transmitting the at least one command to

one or more of the hosts via

the one or more remote execution processes;

obtaining, from the one or more remote execution processes,

data associated with

the one or more hosts executing the at least one command;

Art Unit: 2136

formatting the data; and
sending the formatted data to
the client.”

5. Dependent claims 2-12,15-25,27-37 are allowable by virtue of their dependencies.
